Projects

RPG Combat Framework (Unreal Engine 5, C++) **Aug - 2025**

- Developed a modular third-person RPG combat system featuring melee combat, dodge rolling, stealth assassination, equipment management, bow combat, and target lock-on mechanics.
- Implemented scalable gameplay architecture using C++, Gameplay Tags, and Animation Blueprints.

Spatial Inventory System (Unreal Engine 5, C++) **Dec 2025**

- Built a Resident Evil-inspired grid-based inventory system with drag-and-drop item management, item rotation, discard functionality, and placement validation.
- Developed inventory UI and data-driven item handling using C++ and UMG.

Gameplay Event Manager (Unreal Engine 5, C++) **May - 2026**

- Created a data-driven event management framework using Gameplay Tags, Data Assets, delegates, and subsystem architecture.
- Implemented event prerequisites, conditional execution, progression tracking, and story-driven gameplay workflows.

Objective & Quest Manager (Unreal Engine 5, C++) **Jan 2026**

- Developed a quest management framework supporting main quests, side quests, Data Table-driven objectives, and automatic UI updates.
- Integrated Gameplay Tags for objective tracking and progression management.

Advanced Weapon & Shooting System (Unreal Engine 5, C++) **Nov 2025**

- Implemented ADS, reloading, weapon sprinting, headshot damage, surface-based impact effects, and Data Asset-driven weapon configuration.
- Supported multiple weapon types including pistols, rifles, and shotguns with unique animations, VFX, and SFX.
